

Android Project: Political Preparedness Project

To update the API key change `API_KEY` value in `CivicsHttpClient` file.

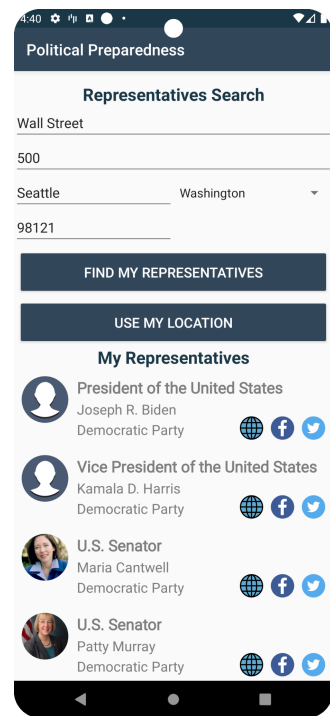

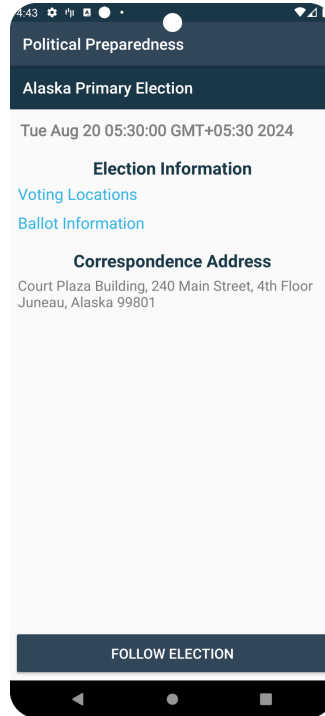

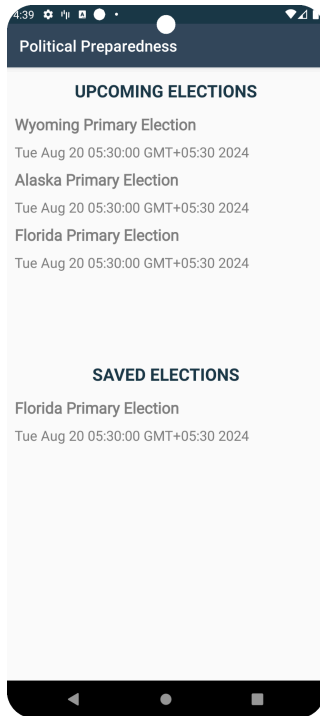

Android UI/UX

- Build a navigable interface consisting of multiple screens of functionality and data
- Construct interfaces that adhere to Android standards and display appropriately on screens of different size and resolution
- Animate UI components to better utilize screen real estate and create engaging content

Local and Network data

- Connect to and consume data from a remote data source such as a RESTful API
- Load network resources, such as Bitmap Images, dynamically and on-demand
- Store data locally on the device for use between application sessions and/or offline use

Android system and hardware integration

- Architect application functionality using *MVVM*
- Implement logic to handle and respond to hardware and system events that impact the Android Lifecycle
- Utilize system hardware to provide the user with advanced functionality and features
